

Thermographic paint for high temperature applications

HERP-HT-MWIR-BK-11

► **Main features:**

high emissivity paint
high mechanical resistance
opaque
permanent paint for long-term use
suitable for uncooled infrared cameras
resistant to high temperatures up to 1000 °C
suitable for application in electrical equipment (very low conductivity)
suitable for industrial furnaces for material temperature treatment,
machining of metal parts, heat resistant building materials for high temperatures

► **Ingredients:**

propane, butane, hydrocarbons, isobutane, Kohlenwasserstoffe, C6, Isoalkane, ethylbenzene, butan-1-ol, cyclohexane

► **Contents:**

400 ml

► **Colour**

black

► **Thermal conductivity:**

0.52 W/mK (100 °C)
0.50 W/mK (300 °C)
0.67 W/mK (500 °C)
2.05 W/mK (700 °C)

► **Other features:**

coating thickness 150 µm (according to recommended application)
coating roughness Ra = 3.5 µm, Rz = 25 µm

► **Packing:**

1 pc minimum

Optical properties

► transmissivity to 1,2 %

Dependence of emissivity on the angle

► for bolometric cameras use the emissivity according to the viewing angle:

Angle (°)	5	10	20	30	40	45	50	60	70	80
Emisivita	0.840	0.839	0.838	0.834	0.829	0.824	0.818	0.800	0.764	0.664

Dates for 1 000 °C, other temperatures are available on the web.
